The magnitudes and the character of the distribution of stresses in turbine runners exposed to the action of centrifugal forces, were determined by laboratory model tests. Results showed that maximum stresses appear in the inlet and exit edges of the blade and the skirt. The stresses in the "curve" of the blade and in the crown are insignificant. (Author)

Bellikis, G. A.
A NEW METHOD FOR DECONTAMINATING TETRAETHYLLEAD. [1963] 5p.
Order from OTS or SLA $[illegible] 63-14391

Trans. of Gigiena i Sanit[ariya] (USSR) 1947, v. 12, no. 11, p. 51-52.

DESCRIPTORS: *Lead compounds, *Ethyl radicals, Fuel additives, *Decontamination, Water, Organic solvents, Kerosene, Decomposition, Acids, Halogen compounds, Buildings, Storage, Soaps, *Fuel contamination.

Broad application of the best of the known antiknock agents - tetraethyllead - causes a problem of decontamination in the production of the ethyl liquids by its mixing with fuel and by use of the leaded fuel. For the decontamination of buildings, equipment and storage places (landing places) there is presented a series of methods. (Author)
